AI INTERN

dotranhieu925@gmail.com | 0969 792 520 | Hanoi, Vietnam

Career Objective

Computer Science undergraduate with strong interests in machine learning, data-driven modeling, and artificial intelligence research. Experienced in implementing machine learning algorithms from scratch, analyzing datasets, and visualizing model performance. Seeking opportunities to contribute to practical AI projects and research-oriented environments.

Education

Posts and Telecommunications Institute of Technology (PTIT) 2023 – Present

Major: Computer Science

GPA: 3.44 / 4.0 CPA: 3.47 / 4.0

Honors & Awards

Academic Excellence Scholarship (Excellent Category) 2025 – 2026

Entrance Scholarship 2023 – 2024

Skills

Programming: Python, C++

Machine Learning: Linear Regression, Logistic Regression, KNN, K-Means, Gradient Descent, Feature Engineering

Deep Learning: CNN, Transformer, Vision Transformer

Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow

Tools: Git, Jupyter Notebook, Docker

Projects

Predicting House Prices using Linear Regression 2025

Implemented a multivariate regression model from scratch using Python and NumPy.

Key Features:

- Applied feature normalization and gradient descent optimization.
- Visualized loss convergence and parameter optimization.
- Evaluated model performance using RMSE and R^2 metrics.

Technologies Used: Python, NumPy, Pandas, Matplotlib

Iris Classification using KNN 2025

Built a KNN classifier for multi-class flower species classification.

Key Features:

- Performed data preprocessing and feature visualization.
- Tuned hyperparameters and evaluated using confusion matrix.

Technologies Used: Python, Scikit-learn, Matplotlib

Certifications

TOEIC: 745

Interests

Machine Learning Research, Computer Vision, Data Analysis, Reading AI Research Papers
