

Do Tran Hieu

INTERN JAVA BACKEND

dotranhieu925@gmail.com | 0969 792 520

Career Objective

Java Backend Intern specializing in Spring Boot and RESTful APIs, with experience building real-time and scalable applications. Strong in concurrency handling, system design, and integrating tools like Elasticsearch and Docker. Eager to contribute to production systems and grow in backend engineering.

Education

Posts and Telecommunications Institute of Technology (PTIT)

2023 – Present

Major: Computer Science

GPA: 3.44 / 4.0 CPA: 3.47 / 4.0

Honors & Awards

Academic Excellence Scholarship (Excellent Category)

Semester 4, 2025 – 2026

Awarded by PTIT for outstanding academic performance (GPA-based merit scholarship).

Entrance Scholarship

The first year 2023 - 2024

Awarded Entrance Scholarship based on academic excellence.

Skills

Programming Languages: Java, C++, Python, JavaScript (basic)

Backend Development: Spring Boot, RESTful APIs, MyBatis(SQL Mapper) Spring Security (JWT), JPA/Hibernate, Web-Socket

Search Engine: Elasticsearch

Security: OAuth2 Login(Google, Facebook), RBAC (Role-Based Access Control), Custom Security Expressions

Frontend: ReactJS, Angular(basic)

Database & Migration: MySQL, SQL Server, PostgreSQL, Redis, Flyway

Cloud & Storage: Cloudinary, Google Cloud Storage

DevOps & Tools: Git/GitLab, Swagger UI, Maven, Postman, Docker, Azure, CI/CD(Github Action)

Work Experience

Backend Developer Intern

Mar 2026 – May 2026

DEHA Vietnam

Task Management Website

GitLab: gitlab.com/dotranhieu925/first-demo

Independently developed a task management system as an internal project during internship, focusing on scalability, real-time collaboration, and data consistency.

Key Responsibilities & Achievements:

- Designed and implemented a relational data model supporting many-to-many relationships between users, teams, and tasks.
- Built real-time communication features (group chat, private messaging) using WebSocket.
- Integrated **Yjs** for collaborative document editing with active user tracking.
- Developed real-time commenting and notification system for task updates and assignments.
- Ensured data consistency in concurrent environments using **Optimistic Locking**.
- Improved search performance by integrating Elasticsearch for full-text search.
- Designed and exposed RESTful APIs secured with JWT authentication.

Technologies Used:

- Spring Boot, Spring Security, JPA/Hibernate, WebSocket
- ReactJS, Yjs
- MySQL, Elasticsearch (Dockerized)
- Docker, Maven, Git, Postman

Projects

Furniture Website

Dec 2025 – Feb 2026

GitHub: github.com/tranhieu2005do/FurnitureWeb

Developed a multi-role furniture e-commerce website supporting five user roles: Admin, Staff, Shipper & Installer, Warehouse Manager, and Customer.

Key Features:

- **Customer Side:** User registration and authentication; profile management; product browsing; cart management (add/remove items); order tracking and history (delivered, canceled, reordered, etc.); real-time chat with staff for product consultation and custom design requests; post-purchase product reviews and ratings.
- **Admin Side:** System administration including management and monitoring of products, categories, users, and orders; dashboard displaying key business metrics and statistics.
- **Staff Side:** Daily order management; direct messaging with customers; manual order creation for customers; updating order statuses throughout the processing lifecycle.
- **Shipper & Installer:** Access to assigned delivery and installation orders; updating delivery and installation status for each order.
- **Warehouse Manager:** Inventory management including creating and tracking inventory logs for all products and product variants.

Technologies Used:

- **Backend:** Spring Boot, Spring Security, JPA/Hibernate, WebSocket (messaging), Spring Kafka (basic usage: producer publishes messages and consumer processes messages within a monolithic application), Caching
- **Database:** MySQL
- **API:** RESTful APIs secured with JWT authentication
- **Tools:** Maven, Git, Postman, Offset Explorer, Docker (used to run Zookeeper and Kafka broker)

Interests

Artificial Intelligence, Machine Learning basics, Algorithms, Reading technical blogs
